PixMax 3D Sublimation Heat Press Machine / Multifunctional Vacuum Transfer Printer / Mugs Plates Phone Cases T-Shirts (Red) From PixMax

The PixMax 3D Sublimation Heat Press transfers onto a variety of polyester, polymix or polymer coated consumables including mugs, phone cases, plates, tshirts, photo crystals, mouse mats and jigsaw puzzles.

Holds up to 12 x 11oz mugs

Interchangeable between 3D and flat pressing

Consistent pressure applied when the built in vacuum is turned on

Upper and lower heating elements

Large control panel and LED display

Temperature can be set in Celsius or Fahrenheit

Timer range 0999 seconds

This type of heat press is known as a 3D machine because of its depth, which allows it to be used for so many different types of consumable.

The main difference between our 3D sublimation press and other PixMax heat presses is the built in vacuum, this creates the pressure needed for effective sublimation transfer when air is extracted from the machine and pulls the silicone tight across the product.

The 3D sublimation machine has heating elements on the upper and lower heating platens, providing continuous heat from above and below the consumable to ensure designs are perfectly sublimated onto your item.

Ideal for sublimation printing in a new business or for personal hobbies, this heat press acts as an allinone machine which is easier to use and gives the same great results; combining the plate, mug and flat heat presses. Included accessories

4 silicone mug holders for pressing onto 11oz mugs

1 silicone sheet for flat consumables

1 matte iPhone 5 cover

1 glossy iPhone 6 cover

The iPhone 5 and 6 cases allow you to test out pressing onto phone cases, in order to determine the optimum settings.

Please note that this product does not come with aluminium moulds which are

required for pressing onto phone and tablet cases.

Voltage 220V / Upper and lower heating platens 1400W each / Vacuum power 150W / Maximum vacuum degree 850mmHg / Height with machine open 62.7cm
